The Four-Sprint Process

At the heart of Building An Application in Four Sprints lies the four-sprint process. Each sprint is designed to achieve a specific milestone, from defining requirements to deploying the application.

Sprint 1: Define and Plan

This sprint focuses on gathering requirements, defining user stories, and creating the product backlog.

Sprint 2: Develop and Test

In the second sprint, developers build the core functionality of the application and conduct rigorous testing.

Sprint 3: Refine and Iterate

Sprint 3 involves refining the application based on user feedback, fixing bugs, and improving performance.

Sprint 4: Deploy and Maintain

The final sprint concludes with the deployment of the application and the establishment of a maintenance plan.

Building An Application in Four Sprints Developer Reference is an essential resource for developers seeking to master agile application development.
